DEEP QUERY ASK CASE MANAGEMENT

Project Overview

Project Name: Customer Support Case Management

Salesforce Cloud Used: Service Cloud

Role Focus: Salesforce Business Analyst

The organization wants to modernize and standardize how customer complaints and support requests are handled by implementing Salesforce Service Cloud as a centralized support system.

In Scope

Case creation (Email-to-Case / Web-to-Case)

Case assignment rules

Case lifecycle management

SLA tracking using Entitlements

Case escalation rules

Reports and dashboards

Out of Scope

Telephony (CTI) integration

Chatbot or AI-based support

ERP or billing system integration

Knowledge base automation (optional future phase)

Business Requirement Document

1. Centralize all customer support requests in Salesforce.
2. Automatically create Cases from customer emails.
3. Automatically create Cases from web forms.
4. Automatically assign Cases to the appropriate support agent.
5. Track Case Type and Priority for proper handling.
6. Track the complete Case lifecycle from creation to closure.
7. Monitor Service Level Agreements (SLAs) using Entitlements.
8. Automatically escalate Cases when SLA requirements are not met.
9. Send notifications and status updates to customers.
10. Maintain complete Case history for future reference.
11. Provide visibility of open, overdue, and pending Cases.
12. Monitor support agent workload and performance.
13. Provide reports and dashboards for management.
14. Improve customer service quality and customer satisfaction.
15. Maintain centralized historical customer support data in Salesforce.

Functional Requirement Document

1. The system shall provide a Case Type field to classify customer issues.
2. The system shall provide a Priority field to identify Case urgency.

3. The system shall provide a Status field to track Case progress.
4. The system shall capture the Case Origin, such as Email or Web.
5. The system shall provide a Description field to capture customer issues.
6. The system shall automatically create Cases through Email-to-Case.
7. The system shall automatically create Cases through Web-to-Case.
8. The system shall use Assignment Rules to assign Cases to support agents.
9. The system shall assign Cases based on Case Type and Priority.
10. The system shall use Entitlements to monitor Case SLAs.
11. The system shall use Case Milestones to track SLA activities.
12. The system shall maintain Case ownership and status history.
13. The system shall use Validation Rules to ensure required Case information is entered.
14. The system shall provide reports for Open, Overdue, and Priority Cases.
15. The system shall provide dashboards to monitor Case and support-agent performance.

Data Model Requirement

ID	Object / Relationship	Requirement
1	Account	Store customer/company information.
2	Contact	Store customer contact information.

3	Case	Store customer support issues.
4	Case Comment	Store comments and communication related to Cases.
5	Case History	Maintain Case activity and status history.
6	Entitlement	Manage customer service agreements and SLAs.
7	Case Milestone	Track SLA-related activities.
8	User	Store support agents and Salesforce users.
9	Account → Contact	One Account can have multiple Contacts.
10	Account → Case	One Account can have multiple Cases.
11	Contact → Case	One Contact can have multiple Cases.
12	Case → Entitlement	A Case can be associated with an Entitlement.
13	Entitlement → Case Milestone	An Entitlement can contain Case Milestones.
14	Case Fields	Case stores Type, Priority, Status, Origin, and Description.
15	Historical Data	Maintain centralized customer support history in Salesforce.

Email To Case Requirement

1. Customer email shall automatically create a Case in Salesforce.

2. A dedicated support email address shall be configured for Case creation.
3. Email-to-Case shall be enabled in Salesforce.
4. New Cases shall be assigned to the configured user/queue.
5. Default Case Priority shall be defined for incoming emails.
6. Email-created Cases shall identify the appropriate Case Origin.
7. Email headers shall be saved with the Case for reference.
8. A Task may be created from incoming customer emails for follow-up.
9. Customer/support emails shall be forwarded to the Salesforce Email-to-Case address
10. Support users shall verify that the incoming email successfully creates a Case.

Web-to-Case Requirements

1. Customers shall be able to submit support requests through a web form.
2. Web-to-Case shall be enabled in Salesforce.
3. Web-submitted Cases shall have Origin set to Web.
4. The web form shall capture required customer information.
5. The web form shall capture the customer's support issue/description.
6. Required Case fields shall be included in the web form.
7. A default response template shall be configured where required.
8. Salesforce-generated Web-to-Case HTML shall be used for the form.
9. Submitted forms shall automatically create Case records.
10. Support users shall verify successful Case creation after submission.

Web-to-Case Settings

Use a simple web form or a self-service customer community to make it easy for customers to submit cases directly to your customer support group. For detailed information on setting up Web-to-Case or Self-Service Community templates, see the Salesforce help.

Basic Settings

- Enable Web-to-Case: ☒
- Require reCAPTCHA Verification: ☐
- Default Case Origin: Web

Auto-Response Email Settings

- Default Response Template: Support Case Created (Web)
- Hide Record Information: ☐
- Email Signature:

Save Cancel

Case Field Requirements

ID	Field	Requirement	Field Type	Priority
1	Case Type	Case Type shall classify the customer issue.	Picklist	High
2	Priority	Priority shall indicate the urgency of the Case.	Picklist	High
3	Status	Status shall track the Case lifecycle.	Picklist	High
4	Origin	Origin shall identify how the Case was received.	Picklist	High
5	Description	Description shall capture detailed customer issue information.	Long Text Area	High

6	Account	Case shall be associated with the relevant customer Account.	Lookup	High
7	Contact	Case shall be associated with the relevant customer Contact.	Lookup	High
8	Case Owner	Each Case shall have an assigned owner/agent.	Lookup/Standard	High
9	SLA Violation	SLA status shall be available for SLA monitoring.	Picklist/Custom	Medium
10	Case Number	Each Case shall have a unique Case identifier.	Auto Number/Standard	High

Case Assignment Requirements

Requirement	Description
Automatic Assignment	Incoming Cases shall be automatically assigned.
Case Type Routing	Cases shall be routed based on Case Type.
Priority Routing	Priority can be used as a routing condition.
Assignment Rules	Salesforce Case Assignment Rules shall control automatic routing.

Correct Owner	Each Case shall be assigned to the appropriate support user/queue.
Rule Priority	Multiple assignment conditions shall follow defined sort order.
Workload Distribution	Assignment logic shall help distribute support workload.
High Priority Cases	High-priority Cases shall be routed according to defined business rules.
Unassigned Case Prevention	Cases should not remain unnecessarily unassigned.
Assignment Validation	BA/Admin shall validate that Cases are assigned correctly.

Developer Edition

Setup Home Object Manager

Case Assignment Rules

Case Assignment Rules

Automatically assign cases to users or queues based on criteria you define. You can create multiple rules, but only one rule can be active at a time.

Click a rule name to add or edit rule entries.
